Reverse Current	I _R			10	μΑ	V _R =5V

1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve. Tolerance of Luminous Intensity: ±15%.

2. $_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.

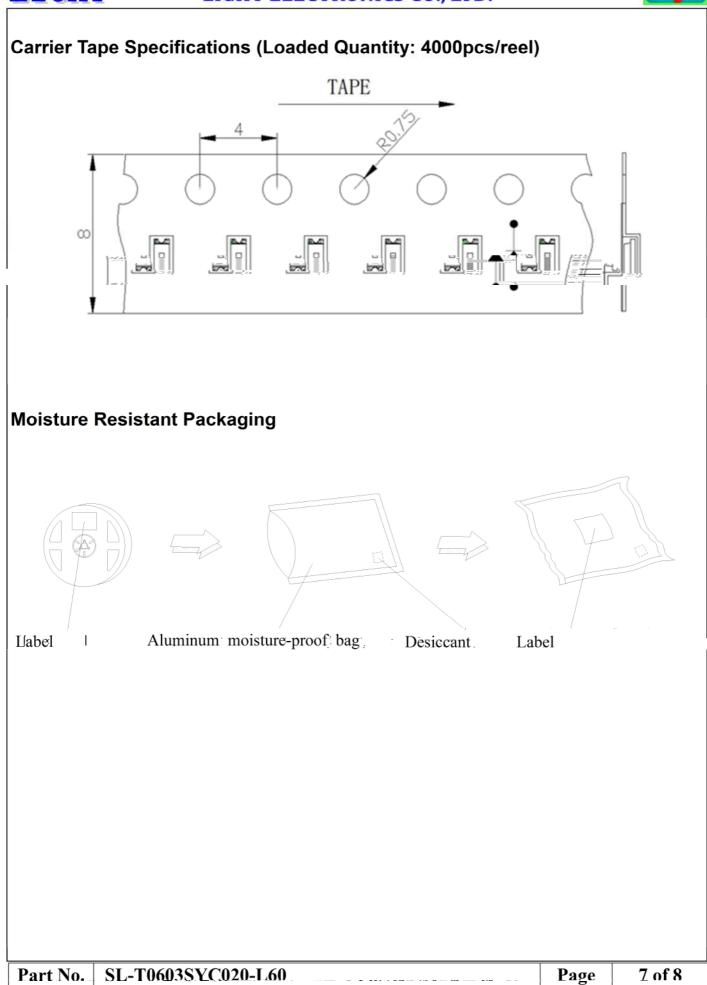

3.

single wavelength which defines the color of the device. Tolerance of Dominant Wavelength: ± 1.0 nm.

4. Tolerance of Forward Voltage: ± 0.1 V.

Suggest IR Reflow Condition For Lead Free

TIME

- 1. Reflow soldering should not be done more than two times.
- 2. When soldering, do not put stress on the LEDs during heating.

Soldaring iron

- 1. When hand soldering, the temperature of the iron must less than 300° C for 3 seconds.
- 2. The hand solder should be done only once.

Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of LEDs will or will not be damaged by repairing.
